This wind chime features a detailed ornamental skull (remix from JEFF) and matching tubes, all designed for 3D printing.

Key features:

- **Integrated Design:** The hanging string goes directly through the top of the skull for a clean, seamless look.
- **Easy Assembly:** All holes for the cord are 6mm in diameter, making it easy to use various types of paracord or twine. Use three or six tubes with different notes. I recommend use larger diameter in front and on back.
- **Full 3D Print:** Everything from the skull and tubes to the decorative beads is 3D printed.

I've attached the **STEP file** so you can easily modify the design or adapt it to your needs.

Enjoy printing!
